CELLULAR REPAIR INFUSER

## When using for the First Time Please Rinse The Cellular Repair Infuser Thoroughly Under Running Water. Then...

Drop a Cellular Repair Infuser into a container of water, seal with a cap or lid and shake vigorously for 15 seconds...

You can use any type of drinking water such as tap water, purified water, modified water, or active water as long as it is clean and approved safe to drink. If you are using bottled water, it's best to choose a soft water (water hardness index of 100 or less).

### In about 1 hour...

You will have, great tasting, hydrogen-rich water.

### Drink approximately 1.5 liters of CRI Water per day.

The amount of liquid generally required in a day for an adult is approximately 2.5 liters. About 1 liter of which is obtained from food but the remaining 1.5 liters should be consumed as drinking water for better health.

Poured  
Out  
Water

Prepare  
a  
Bottle

Put in a  
CRI Stick and  
seal with cap.

In about 1 hour  
hydrogen  
abundant water  
is completed.

### You can take your CRI bottle of Hydrogen Water with you wherever you go!

The CRI stick is just the right size for a 500-ml (1-pint) plastic bottle so it is convenient for you to take with you wherever you go. For hygienic purpose, please change the plastic bottle after each month. Please rinse the CRI stick(s) with running water when you replace the plastic bottles.

**PLEASE NOTE:** Replace the cap tightly every time after drinking.

### Optimal health for the whole family including your pets!

Cellular Repair Infuser's water is good for everyone's health from babies to the elderly and also your pets.

**CAUTION:** Please do not put CRI stick(s) in pet's drinking bowl to avoid swallowing or chewing the stick.

## WHAT IS THE CELLULAR REPAIR INFUSER?

### FAQs

#### About Hydrogen-rich water...

##### Q Why is hydrogen-rich water good for our body?

A Hydrogen-rich water is effective in eliminating active oxygen (free radicals). Active oxygen is produced constantly in our bodies due to stress, alcohol, smoking, UV rays, breathing polluted air, food additives, excessive exercise, environment etc. Active oxygen (free radicals) is considered to cause extensive oxidative damage to our bodies, which leads to a variety of lifestyle-related diseases as well as aging.

##### Q How does Doctor Hydrogen Water differ from alkali-ion water?

A Alkali ion water contains hydrogen by electrolysis, but hydrogen created in this manner will diffuse into the air a short time after being produced. The Cellular Repair Infuser was developed based on a more sophisticated concept and is able to produce hydrogen-rich water by utilizing the chemical reaction of hydro-reactive Magnesium and water.

##### Q How do I store the Hydrogen Enriched Water?

A The hydrogenated water in a sealed plastic bottle lasts for a day if stored at room temperature, and lasts for 2~3 days if stored in a refrigerator. After that, please discharge and refill the bottle before drinking. Please remove the CRI stick after one hour.

##### Q Can I use water produced by the Cellular Repair Infuser for cooking?

A Yes, Absolutely! Once you take the stick out of the water, the hydrogen will diffuse into the air, but it deoxidizes your ingredients before it diffuses. It actually makes your food taste better.

**WARNING:** Do not boil the water (or cook) with the stick in it. Do not put the Cellular Repair Infuser in hot water.

#### About the Cellular Repair Infuser

##### Q What is the Cellular Repair Infuser made of?

A The stick's inner substance is processed 99.9% ultra-pure, hydro-reactive magnesium, and the outer casing is made from medical grade PE.

##### Q How long can I use CRI stick(s)?

A You can use a CRI stick for approximately three months if you use 1 stick per 500ml three times per day (for a total of 1,500 ml per day) or 2 sticks for 1 liter (for a total of 3,000 ml per day) or 3 sticks for 2 liters (for a total of 6,000 ml per day). You should drink about 1.5 Liters (1,500 mL) of hydrogen-rich water daily... or about 3 large glasses of hydrogen rich water daily.

##### Q The Cellular Repair Infuser floats and sticks out from the water. What should I do?

A You can refill the bottle with water, or screw the cap tightly, and place the bottle horizontally. The stick will be soaked in water and continue producing hydrogen.

##### Q Can I put the Cellular Repair Infuser(s) into tea?

A Please do not put the CRI stick(s) into tea, juice, milk, or any soft drinks, alcohol, or mineral water with water hardness higher than 100, other than drinking water (tap water, filtered tap water, spring water etc.) You will lose the hydrogen if you boil the hydrogen-rich water that is poured from your bottle.
